model	mean square error
Hours Studied	317.8
Sleep Hours	368.25
Sample Question Papers Practiced	368.8
Previous Scores	59.95
Hours Studied + Previous Scores	27.4

Conclusion

The best variable to use is (Hours Studied + Previous Scores) Because it is the smallest error and the higher accuracy. it has mean square error 27.4. I add a new column that adds Hours Studied with Previous Scores.
